, *Web Page Recommendation Models* Sule Gunduz-Oguducu, 2022-06-01 One of the application areas of data mining is the World Wide Web WWW or Web which serves as a huge widely distributed global information service for every kind of information such as news advertisements consumer information financial management education government e commerce health services and many other information services The Web also contains a rich and dynamic collection of hyperlink information Web page access and usage information providing sources for data mining The amount of information on the Web is growing rapidly as well as the number of Web sites and Web pages per Web site Consequently it has become more difficult to find relevant and useful information for Web users Web usage mining is concerned with guiding the Web users to discover useful knowledge and supporting them for decision making In that context predicting the needs of a Web user as she visits Web sites has gained importance The requirement for predicting user needs in order to guide the user in a Web site and improve the usability of the Web site can be addressed by recommending pages to the user that are related to the interest of the user at that time This monograph gives an overview of the research in the area of discovering and modeling the users interest in order to recommend related Web pages The Web page recommender systems studied in this monograph are categorized according to the data mining algorithms they use for recommendation Table of Contents Introduction to Web Page Recommender Systems Preprocessing for Web Page Recommender Models Pattern Extraction Evaluation Metrics

Nonlinear Filtering and Stochastic Control S.K. Mitter, A. Moro, 2006-11-15 Location and Layout Planning W. Domschke, A. Drexl, 2013-03-09 *Algebraic Methods: Theory, Tools and Applications* Martin Wirsing, Jan A. Bergstra, 1989-09-20 **Mathematical Ecology** S.A. Levin, T.G. Hallam, 2013-03-13 Negation and Control in Prolog Lee Naish, 1986-10 The contributions to this volume cover all aspects of the assessment and management of hepatobiliary disease The focal points of the book consist of three state of the art summaries The first of these deals with the highly topical problem of liver transplants from the point of view of patient selection The second considers drug induced liver injury in view of the fact that the liver is the main metabolic site for a number of drugs The final summary deals with liver and aging it asks whether the liver follows the aging process of the host organisms and whether the liver of aged liver transplant candidate donors could be suitable for grafting Aside from these topics the volume presents basic research on hepatic transport mechanisms intrahepatic cholestasis and gall stone disease which serves as a background for the topics more specifically concerning the assessment of liver function Much of the book is then devoted to the management of the commonest forms of liver diseases and their complications such as chronic active hepatitis liver cirrhosis portal hypertension hepatic encephalopathy hepatorenal syndrome and ascites **Mathematical Research Today and Tomorrow** Carlos Casacuberta, Carles Casacuberta, Manuel Castellet, 1992-12-14 The Symposium on the Current State and Prospects of Mathematics was held in Barcelona from June 13 to June 18 1991 Seven invited Fields medalists gave talks on the

development of their respective research fields The contents of all lectures were collected in the volume together with a transcription of a round table discussion held during the Symposium All papers are expository Some parts include precise technical statements of recent results but the greater part consists of narrative text addressed to a very broad mathematical public

Nonlinear Potential Theory and Weighted Sobolev Spaces Bengt O. Turesson, 2000-06-21 The book systematically develops the nonlinear potential theory connected with the weighted Sobolev spaces where the weight usually belongs to Muckenhoupt's class of A_p weights These spaces occur as solution spaces for degenerate elliptic partial differential equations The Sobolev space theory covers results concerning approximation extension and interpolation Sobolev and Poincaré inequalities Maz'ya type embedding theorems and isoperimetric inequalities In the chapter devoted to potential theory several weighted capacities are investigated Moreover Kellogg lemmas are established for various concepts of thinness Applications of potential theory to weighted Sobolev spaces include quasi continuity of Sobolev functions Poincaré inequalities and spectral synthesis theorems

Unique Solutions for Strategic Games Werner Güth, Brigitte Kalkofen, 2012-12-06 This book develops a general solution concept for strategic games which resolves strategic uncertainty completely The concept is described by a mathematically formulated solution procedure and illustrated by applying it to many interesting examples A long nontechnical introduction tries to survey and to discuss the more technical parts of the book The book and especially the introduction provide firm and consistent guidance for scholars of game theory There are many open problems which could inspire further research efforts

Modular Functions of One Variable V J. P. Serre, D. B. Zagier, 2006-11-15 The proceedings of the conference are being published in two parts and the present volume is mostly algebraic congruence properties of modular forms modular curves and their rational points etc whereas the second volume will be more analytic and also include some papers on modular forms in several variables

Banach Spaces of Analytic Functions. J. Baker, C. Cleaver, J. Diestel, 2006-11-15 With contributions by numerous experts

Potential Theory on Infinite Networks Paolo M. Soardi, 2006-11-15 The aim of the book is to give a unified approach to new developments in discrete potential theory and infinite network theory The author confines himself to the finite energy case but this does not result in loss of complexity On the contrary the functional analytic machinery may be used in analogy with potential theory on Riemann manifolds The book is intended for researchers with interdisciplinary interests in one of the following fields Markov chains combinatorial graph theory network theory Dirichlet spaces potential theory abstract harmonic analysis theory of boundaries

Eells,2006-11-15 **LUCAS Associative Array Processor** Christer Fernstrom,Ivan Kruzela,Bertil Svensson,1986-03 After historical introduction the aspiration technique and imaging modalities are described Thereafter the use of aspiration cytology in the diagnosis and mainly in the staging of urologic cancers is on still not well known applications of the procedure in the staging of some organs bladder adrenals penis testis and secondary ureteral strictures are reported Turbulence and Magnetic Fields in Astrophysics Edith Falgarone,Thierry Passot,2003-03-11 This book contains review articles of most of the topics addressed at the conference on Simulations of Magnetohydrodynamic turbulence in astrophysics recent achievements and perspectives which took place from July 2 to 6 2001 at the Institut Henri Poincaré in Paris We made the choice to publish these lectures in a tutorial form so that they can be read by a broad audience As a result this book does not give an exhaustive view of all the subjects addressed during the conference The main objective of this workshop which gathered about 90 scientists from different fields was to present and confront recent results on the topic of turbulence in magnetized astrophysical environments A second objective was to discuss the latest generation of numerical codes such as those using adaptive mesh refinement AMR techniques During a plenary discussion at the end of the workshop discussions were held on several topics often at the heart of vivid controversies Topics included the timescale for the dissipation of magneto hydrodynamical MHD turbulence the role of boundary conditions the characteristics of imbalanced turbulence the validity of the polytropic approach to Alfvén waves support within interstellar clouds the source of turbulence inside clouds devoid of stellar activity the timescale for star formation the Alfvén Mach number of interstellar gas motions the formation process for helical fields in the interstellar medium The impact of small upon large scales was also discussed **Case Studies in Bayesian Statistics** Constantine Gatsonis,James S. Hodges,Robert E. Kass,Nozer D. Singpurwalla,2012-12-06 The past few years have witnessed dramatic advances in computational methods for Bayesian inference As a result Bayesian approaches to solving a wide variety of problems in data analysis and decision making have become feasible and there is currently a growth spurt in the application of Bayesian methods The purpose of this volume is to present several detailed examples of applications of Bayesian thinking with an emphasis on the scientific or technological context of the problem being solved The papers collected here were presented and discussed at a Workshop held at Carnegie Mellon University September 29 through October 1 1991 There are five major articles each with two discussion pieces and a reply These articles were invited by us following a public solicitation of abstracts The problems they address are diverse but all bear on policy decision making Though not part of our original design for the Workshop that commonality of theme does emphasize the usefulness of Bayesian methods in this arena Along with the invited papers were several additional commentaries of a general nature the first comment was invited and the remainder grew out of the discussion at the Workshop In addition there are nine contributed papers selected from the thirty four presented at the Workshop on a variety of applications This collection of case studies illustrates the ways in

which Bayesian methods are being incorporated into statistical practice The strengths and limitations of the approach become apparent through the examples
